EXPERIMENT-7

Data Visualization Using Tableau

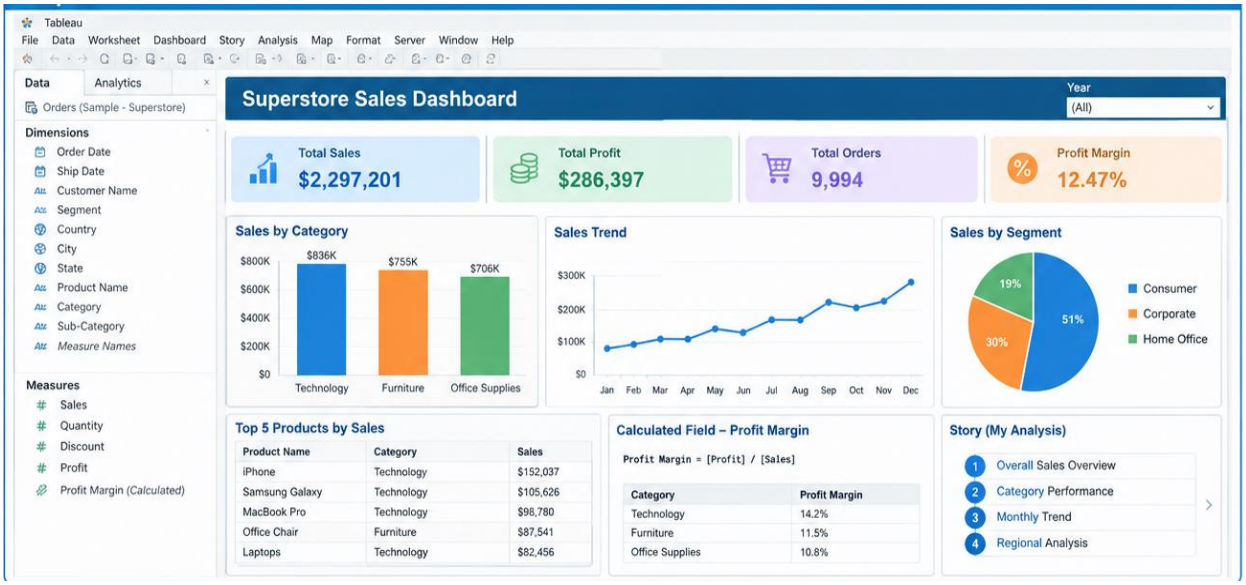

Aim:

To learn and implement data visualization using Tableau by connecting to various data sources, creating basic charts, developing calculated fields, and building interactive dashboards and stories for effective data analysis.

Algorithm:

1. Start Tableau Desktop and explore its interface.
2. Connect to data sources such as Excel, CSV files, and SQL databases.
3. Import the required dataset and preview the data.
4. Create basic visualizations such as bar charts, line charts, and pie charts.
5. Create calculated fields using Tableau calculations.
6. Customize charts by adding titles, labels, colors, and filters.
7. Combine multiple visualizations to create a dashboard.
8. Create a story by arranging worksheets and dashboards in a logical sequence.
9. Add filters and interactive features to explore the data.
10. Verify the visualizations, calculations, dashboard, and story.
11. Analyze the results and present the insights.
12. Stop the experiment.

Output:

Result:

Thus, data visualization using Tableau was successfully performed. Various data sources were connected, basic charts were created, calculated fields were implemented, and interactive dashboards and stories were developed for effective data analysis and presentation.
